

Underhill Precision Cloudburst Nozzle with Brass High Flow Control Valve and 3/4in MHT x 1in FHT Adapter

RGHN4800CV

Details

The Precision Cloudburst hose end nozzle is a high volume version of our popular Rainmaker greens syringe nozzle design. The Cloudburst delivers an increased volume of water (approximately 80% more) in the same broad fan pattern and large soft droplets as the Rainmaker. The open orifice design resists plugging with grass clippings and sand like most conventional shower nozzles. The Cloudburst was designed for quickly watering localized dry areas in fairways, or to "drench in" or apply wetting agents with a large volume of water. Irrigate without disturbing turf, dirt, seeds, etc., with the precise solution for hard watering applications. Includes a brass high flow control valve and 3/4in MHT x 1in FHT adapter. 35+ GPM Blue

- Quickly water localized dry areas
- Use to "Drench in" wetting agents or dry areas with a large volume of water
- Emits solid cone pattern
- Unique "fish mouth" design for uniform and even distribution
- Rubber tipped ends for longevity
- Solid brass, machined construction
- Includes 3/4in brass high flow control valve and adapter
- Flow rate 35+ GPM
- Blue

Specifications

Manufacturer	Underhill
Color	Blue
Flow Rate	35 gpm
Inlet Size	.75 in
Material	Brass
